

The Township of Gloucester is in the process of drafting an ESP, which is the next step in the ESIP process. The Energy Savings Plan will be a list of defined retrofits the Township has decided to implement identified in the Energy Audit. The plan will show savings the Township can incur after implementation.

During this time of collaboration between the Township Energy Consultant and ESCO on the Energy Savings Plan, the Township has taken the necessary steps to retrofit the Municipal Complex with energy efficient T-8 super saver fluorescent light fixtures, annual savings from this installation will save the Township \$7,000 annually and has a ROI of 563.5%. Lastly, the Township used percentage of their Energy Efficiency Conservation Block Grant money to install a 33 kW solar roof-mount system. The 33 kW system aids the Township in reducing their energy consumption from the current utility, saving the Township \$3,500 annually.
